

## Beatrice Farrand Society Facilities Report

August 1, 2015

The list of needed repair and maintenance work that I provided at our May board meeting remains virtually the same with the following exceptions:

The dead donated cherry tree has been removed from the rear of the terrace garden. The previously restored terrace garden fence has deteriorated further requiring repair and painting. Note: It is the first thing you see as you enter the restored terrace garden.

I have reminded Dick Mace that the new roof of the Farrand wing requires an annual inspection to maintain its warranty in force. He is to insure that it is scheduled with the installer.

I also asked Dick to check the new gutter system on the Farrand wing for debris. It was overflowing into the entrance garden during a recent rain storm rather than transporting the water to the downspouts.
